Foreword	xi
Preface	xiii
Contributors	xvii
Acknowledgments	xix
Introduction: Historic Timeline	xxi
PART I BASIC ELECTRON DEVICES	
1 Bipolar Transistors	3
<i>John D. Cressler and Katsuyoshi Washio</i>	
1.1 Motivation	3
1.2 The <i>pn</i> Junction and its Electronic Applications	5
1.3 The Bipolar Junction Transistor and its Electronic Applications	10
1.4 Optimization of Bipolar Transistors	15
1.5 Silicon-Germanium Heterojunction Bipolar Transistors	17
References	19
2 MOSFETs	21
<i>Hiroshi Iwai, Simon Min Sze, Yuan Taur and Hei Wong</i>	
2.1 Introduction	21
2.2 MOSFET Basics	21
2.3 The Evolution of MOSFETs	27
2.4 Closing Remarks	31
References	31
3 Memory Devices	37
<i>Kinam Kim and Dong Jin Jung</i>	
3.1 Introduction	37
3.2 Volatile Memories	39
3.3 Non-Volatile Memories	41
3.4 Future Perspectives of MOS Memories	43
3.5 Closing Remarks	45
References	46

4	Passive Components	49
	<i>Joachim N. Burghartz and Colin C. McAndrew</i>	
4.1	Discrete and Integrated Passive Components	49
4.2	Application in Analog ICs and DRAM	52
4.3	The Planar Spiral Inductor—A Case Study	54
4.4	Parasitics in Integrated Circuits	57
	References	57
5	Emerging Devices	59
	<i>Supriyo Bandyopadhyay, Marc Cahay and Avik W. Ghosh</i>	
5.1	Non-Charge-Based Switching	59
5.2	Carbon as a Replacement for Silicon and the Rise of Graphene Electronics and Moletronics	63
5.3	Closing Remarks	66
	References	67
 PART II ASPECTS OF DEVICE AND IC MANUFACTURING		
6	Electronic Materials	71
	<i>James C. Sturm, Ken Rim, James S. Harris and Chung-Chih Wu</i>	
6.1	Introduction	71
6.2	Silicon Device Technology	71
6.3	Compound Semiconductor Devices	75
6.4	Electronic Displays	79
6.5	Closing Remarks	82
	References	83
7	Compact Modeling	85
	<i>Colin C. McAndrew and Laurence W. Nagel</i>	
7.1	The Role of Compact Models	85
7.2	Bipolar Transistor Compact Modeling	87
7.3	MOS Transistor Compact Modeling	89
7.4	Compact Modeling of Passive Components	92
7.5	Benchmarking and Implementation	94
	References	94
8	Technology Computer Aided Design	97
	<i>David Esseni, Christoph Jungemann, Jürgen Lorenz, Pierpaolo Palestri, Enrico Sangiorgi and Luca Selmi</i>	
8.1	Introduction	97
8.2	Drift-Diffusion Model	98

Contents	vii
8.3 Microscopic Transport Models	100
8.4 Quantum Transport Models	101
8.5 Process and Equipment Simulation	102
References	105
9 Reliability of Electron Devices, Interconnects and Circuits	107
<i>Anthony S. Oates, Richard C. Blish, Gennadi Bersuker and Lu Kasprzak</i>	
9.1 Introduction and Background	107
9.2 Device Reliability Issues	109
9.3 Circuit-Level Reliability Issues	114
9.4 Microscopic Approaches to Assuring Reliability of ICs	117
References	117
10 Semiconductor Manufacturing	121
<i>Rajendra Singh, Luigi Colombo, Klaus Schuegraf, Robert Doering and Alain Diebold</i>	
10.1 Introduction	121
10.2 Substrates	122
10.3 Lithography and Etching	122
10.4 Front-End Processing	124
10.5 Back-End Processing	125
10.6 Process Control	128
10.7 Assembly and Test	129
10.8 Future Directions	131
References	131
PART III APPLICATIONS BASED ON ELECTRON DEVICES	
11 VLSI Technology and Circuits	135
<i>Kaustav Banerjee and Shuji Ikeda</i>	
11.1 Introduction	135
11.2 MOSFET Scaling Trends	136
11.3 Low-Power and High-Speed Logic Design	137
11.4 Scaling Driven Technology Enhancements	139
11.5 Ultra-Low Voltage Transistors	144
11.6 Interconnects	144
11.7 Memory Design	148
11.8 System Integration	150
References	152

12	Mixed-Signal Technologies and Integrated Circuits	157
	<i>Bin Zhao and James A. Hutchby</i>	
12.1	Introduction	157
12.2	Analog/Mixed-Signal Technologies in Scaled CMOS	159
12.3	Data Converter ICs	161
12.4	Mixed-Signal Circuits for Low Power Displays	164
12.5	Image Sensor Technologies and Circuits	166
	References	168
13	Memory Technologies	171
	<i>Stephen Parke, Kristy A. Campbell and Chandra Mouli</i>	
13.1	Semiconductor Memory History	171
13.2	State of Mainstream Semiconductor Memory Today	178
13.3	Emerging Memory Technologies	183
13.4	Closing Remarks	185
	References	186
14	RF and Microwave Semiconductor Technologies	189
	<i>Giovanni Ghione, Fabrizio Bonani, Ruediger Quay and Erich Kasper</i>	
14.1	III-V-Based: GaAs and InP	189
14.2	Si and SiGe	194
14.3	Wide Bandgap Devices (Group-III Nitrides, SiC and Diamond)	197
	References	199
15	Power Devices and ICs	203
	<i>Richard K. Williams, Mohamed N. Darwish, Theodore J. Letavic and Mikael Östling</i>	
15.1	Overview of Power Devices and ICs	203
15.2	Two-Carrier and High-Power Devices	205
15.3	Power MOSFET Devices	206
15.4	High-Voltage and Power ICs	209
15.5	Wide Bandgap Power Devices	210
	References	211
16	Photovoltaic Devices	213
	<i>Steven A. Ringel, Timothy J. Anderson, Martin A. Green, Rajendra Singh and Robert J. Walters</i>	
16.1	Introduction	213
16.2	Silicon Photovoltaics	215
16.3	Polycrystalline Thin-Film Photovoltaics	218

16.4	III-V Compound Photovoltaics	219
16.5	Future Concepts in Photovoltaics	220
	References	222
17	Large Area Electronics	225
	<i>Arokia Nathan, Arman Ahnood, Jackson Lai and Xiaojun Guo</i>	
17.1	Thin-Film Solar Cells	225
17.2	Large Area Imaging	229
17.3	Flat Panel Displays	233
	References	235
18	Microelectromechanical Systems (MEMS)	239
	<i>Darrin J. Young and Hanseup Kim</i>	
18.1	Introduction	239
18.2	The 1960s – First Micromachined Structures Envisioned	239
18.3	The 1970s – Integrated Sensors Started	240
18.4	The 1980s – Surface Micromachining Emerged	241
18.5	The 1990s – MEMS Impacted Various Fields	244
18.6	The 2000s – Diversified Sophisticated Systems Enabled by MEMS	247
18.7	Future Outlook	248
	References	248
19	Vacuum Device Applications	251
	<i>David K. Abe, Baruch Levush, Carter M. Armstrong, Thomas Grant and William L. Menninger</i>	
19.1	Introduction	251
19.2	Traveling-Wave Devices	252
19.3	Klystrons	255
19.4	Inductive Output Tubes	258
19.5	Crossed-Field Devices	259
19.6	Gyro-Devices	260
	References	262
20	Optoelectronic Devices	265
	<i>Leda Lunardi, Sudha Mokkalapati and Chennupati Jagadish</i>	
20.1	Introduction	265
20.2	Light Emission in Semiconductors	266
20.3	Photodetectors	268
20.4	Integrated Optoelectronics	269
20.5	Optical Interconnects	271
20.6	Closing Remarks	271
	References	271

21	Devices for the Post CMOS Era	275
	<i>Wilfried Haensch</i>	
21.1	Introduction	275
21.2	Devices for the 8-nm Node with Conventional Materials	277
21.3	New Channel Materials and Devices	282
21.4	Closing Remarks	287
	References	287
